Brendan Stewart
GIT 413
Capabilities Outline and Draft

GitHub account:
https://github.com/hl2rs

Outline:

Purpose:
Showcase my background and inspirations as a full-stack software engineer and architect by showcasing a few projects, mentioning skillset, my goals, work experience, and more that would be relevant to an employer or person viewing a repo. In each section have either borders with color or solid color with left and right styling with image included.

I. Header and Introduction

1. **Name and Title**

   > Brendan Stewart, Software Engineer & Architect
   > Studio City, CA | Logitech IT Tiger Team | ASU, 4.0 GPA

2. **Short welcome message**

   > “Welcome! I design and build full-stack platforms, AI tools, and automation that move real businesses forward.”

3. **Banner - Either a linear gradient or relevant picture**

   > An animated gradient banner (violet to blue to teal) with my name and title, a typing tagline that cycles through “building full-stack platforms,” “shipping AI tools & model routers,” “automating operations with data,” and “architecting software that scales,” and a node graph of the systems I architect: Web UI, Node API, AI Router, Vision QA and Data Pipelines. A navigation bar links to About, Skills, Projects, Experience and Contact.

II. About Me

1. **Short Bio**

   > I am an engineer on Logitech’s IT Software Development Tiger Team, building software with company-wide impact as well as leading data and software engineering for Ultimate Ears Pro.
   >
   > My path has been anything but typical. I joined Logitech in 2018 on the manufacturing floor and was promoted numerous times, through analyst and then engineering roles. Along the way I helped digitally transform businesses with heavy automation, better data accessibility, and thoughtful software.
   >
   > Shown beside an animated code-editor card listing my two teams (the IT Software Development Tiger Team and Ultimate Ears Pro), what I lead and build, and my stack.

2. **Education**

> Arizona State University
> B.S. Graphical Information Technology (Full Stack Web Development)
> 4.0 GPA | Graduating Fall 2026

III. Technical Skills and Tools

1. **Languages and frameworks**

> **Languages:** JavaScript, Go, Java, C++, Python, SQL, HTML5, CSS3
> **Frontend:** React, Vue, Three.js, Tailwind CSS, Vite
> **Backend & APIs:** Node.js, Express, Flask, REST APIs, Google Apps Script
>
> Presented as an animated icon board, one labeled row per category.

2. **Development practices and platforms**

> **Development practices**
>
> - **Full-stack architecture:** React/Vue front ends, Node.js & Go services, REST APIs
> - **Automation-first:** Apps Script and API workflows that remove manual work
> - **Data-driven delivery:** pipelines from web store to BigQuery, Data Studio & Tableau
> - **Cloud deployment** on Google Cloud Run & Vercel
> - **Code review & version control** with Git and GitHub
> - **Mentoring & knowledge sharing** across teams and communities
>
> **Platforms**
> **Data & BI:** MongoDB, PostgreSQL, MySQL, SQL Server, Google Cloud SQL, BigQuery, Data Studio, Tableau
> **Cloud & Platforms:** Google Cloud Run, Vercel, Shopify, Arduino, Git, GitHub
> **Design:** Photoshop, Illustrator, InDesign, Canva
>
> **Certifications**

Certification	Issuer
AI Proficiency	Section · ProfAI
Programming in JavaScript	Meta
Machine Learning: From Data to Decisions	MIT
AI & Law (with Honors)	Lund University
Ask Questions to Make Data-Driven Decisions	Google
Foundations: Data, Data, Everywhere	Google

IV. Featured Projects

Each project is a full-width gradient card with an animated mock of the product on the right, alternating between dark and light cards.

1. **Web Auditor**

   > **Full-stack website crawler & auditor.** Crawls an entire website and audits every page for dead links, security gaps, accessibility, content quality and live JavaScript errors, with a real-time dashboard and PDF reports.
   >
   > **Built with:** Python, Flask, Playwright, asyncio, Tailwind
   > **Status:** Open source — https://github.com/hl2rs/Web-Auditor
   >
   > Card style: light, with a dark animated audit-dashboard mock (crawl progress, issue counts, findings list).

2. **Traveler**

   > **Plan an entire trip from a single prompt.** An all-in-one AI travel planning assistant that turns one prompt into day-by-day itineraries, budgets, and personalized recommendations, all in one place.
   >
   > **Highlights:** AI itineraries, budgets, recommendations
   > **Status:** In active development · Coming soon
   >
   > Card style: dark sunset gradient, with an animated trip-planner mock (prompt, day cards, route map, budget bar).

V. Experience, Interests, and Goals

1. **Jobs**

Role	Organization	Period
Full Stack Developer IT Software Development Tiger Team	Logitech	Dec 2018 – Present
AI Champion Driving AI adoption across the Southern California offices	Logitech · Irvine & Westlake Village	Current
Technical Officer & Mentor Mentoring the next wave of developers	Google Developer Group	Apr 2026 – Present

Career climb: Manufacturing (factory floor) → Analyst (data & automation) → Full Stack Developer (UE Pro & IT Tiger Team), shown as an animated staircase.

Impact highlights — led development of:

- **Platforms:** a global on-demand shopping, warehouse & logistics platform for employees and 3rd parties; financial operations, vendor assessment, gaming events & competitions platforms and internal company tools
- **AI:** a CLI and AI model router; a B2C web store AI bot and standalone interfaces; a modular, AI-powered fitment issue tool; automations from storage to an AI 3D modeling platform
- **Vision & Imaging:** QA computer vision models that detect defects down to the millimeter on clear surfaces; imaging algorithms and interfaces for operations & manufacturing
- **Security & Data:** a self-healing web firewall; data pipelines from the web store to visualization tools

Awards & honors

Award	Organization	Year
Employee of the Year	Logitech	2023
Spotlight Award	Logitech	2022, 2023, 2024, 2026
Top Volunteer	K9 Connection	2023

2. **Hobbies**

- **Traveling:** new places & ideas
- **Hiking:** trails & summits
- **Learning:** always leveling up

Shown as three animated tiles: a globe with an orbiting plane, mountains with a rising sun, and an open book.

3. **Aspirations**
   - Grow into a software architect designing AI-native platforms at scale
   - Keep mentoring the next wave of developers through Google Developer Groups
   - Ship products that blend great design, data, and engineering

VI. Contact

1. **Email**

   hello@platmesh.com

2. **Personal website**

Three README Inspirations

1. https://github.com/MaxRohowsky
   a. This readme is awesome, well organized, and visually appealing. I love the use of tables to show projects and experience. Additionally the banner is relevant and looks great. I think the experience table is something I'd like to include in a readme of my own.
2. https://github.com/supuna97
   a. The use of animated artwork and animated icons looks unique and pops to the eye. Having content and an animation side by side as a design looks nice. The icon animations is something I'd like to include in my readme page to add a bit of life to something that would otherwise be static.
3. https://github.com/xiaoluoboding
   a. The gradient and contrast switching cards to show projects with images included on the right in the card is something I have not seen before and something I absolutely want to include. Seeing what the project output looks like is very useful and a great touch.
